# Introduction

## Maintenance, Integrity & Asset Lifecycle Support

We provide complete support for every stage of the asset lifecycle—from pre-assembly to decommissioning—for both onshore and offshore installations.

## Maximising Performance, Minimising Downtime

At the core of our service is a commitment to improving operational efficiency. We help clients reduce downtime, lower operational costs, and extend asset life - while actively lowering environmental footprints.

## Complete Maintenance & Integrity Solutions

Our services range from reactive, ad-hoc repairs to fully managed Operations, Maintenance & Integrity (OM&I) solutions. Every asset and operation is unique, so we customise our support to align with your operating philosophies, asset condition, and long-term performance goals.

Asset Integrity is central to everything we do. We conduct thorough reviews of all modifications, repairs, and maintenance activities to ensure they are fit for purpose and suitable for the full design life of the asset. Above all, we prioritise the safety, integrity, and performance of your assets — delivering long-term operational security and peace of mind.

# Operational Challenges

### Late-life Assets

Managing ageing infrastructure with increasing operational and integrity risks.

### Efficiency Demands

Pressure to optimise operations, reduce downtime, and improve asset reliability.

### O&M Costs

Rising operational and maintenance costs require streamlined delivery models to ensure profit margin is optimised.

### Safety Priorities

Maintaining the highest safety and process integrity standards in increasingly complex environments.

# How Red Sky Help

## Smarter, Lean Service Delivery

Flexible, integrated service models designed to reduce overheads and increase agility.

## O&M Efficiencies

Optimising operations and maintenance strategies to lower costs, minimise downtime, and extend asset life.

## Asset Integrity-First Approach

Prioritising asset safety, integrity, and operational reliability through proactive inspection, maintenance reviews, and fit-for-purpose modifications.

## Digitalisation & Remote Support

Leveraging digital tools, remote vendor interfaces, and data-driven decision-making to enhance efficiency and reduce offshore exposure.

## Optimising Maintenance Frequency

Challenging traditional maintenance frequencies to align with asset risk profiles and operational requirements - reducing unnecessary intervention.

## Preservation & Spares Management

Identifying poor-performing or redundant standby equipment, transitioning them into a preserved state, and redeploying valuable spares to optimise asset availability.

# Our Services

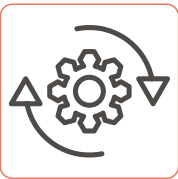

## Full Lifecycle Support

We provide comprehensive support across every phase of the Asset Lifecycle - from pre-assembly and commissioning to late-life operations and decommissioning. Our services are built around a clear operational roadmap, aligning asset strategies and maintenance plans with your long-term performance and operational targets.

## Fully Managed Maintenance

We take full accountability for the safe and efficient delivery of maintenance activities, understanding the unique operational challenges, equipment needs, and workforce demands across your assets. By centralising and optimising resources shared across multiple assets, we reduce costs, improve scheduling efficiency, and maximise asset availability.

## Customised Solutions

We believe in challenging traditional approaches - including Original Equipment Manufacturer (OEM) service recommendations - to tailor maintenance and operational strategies that reflect your asset's actual condition, operating environment, and business goals. through data-driven decision-making and risk-based maintenance planning, we deliver smarter, leaner solutions.

## Asset Integrity Assurance

Asset safety and operational integrity are at the core of our offering. We deliver structured inspection programmes, proactive modification reviews, and a robust approval process to ensure all maintenance, repairs, and upgrades are fit for purpose and support the full design life of your assets. this integrated approach safeguards operational reliability and regulatory compliance, reducing operational risk and improving long-term performance.

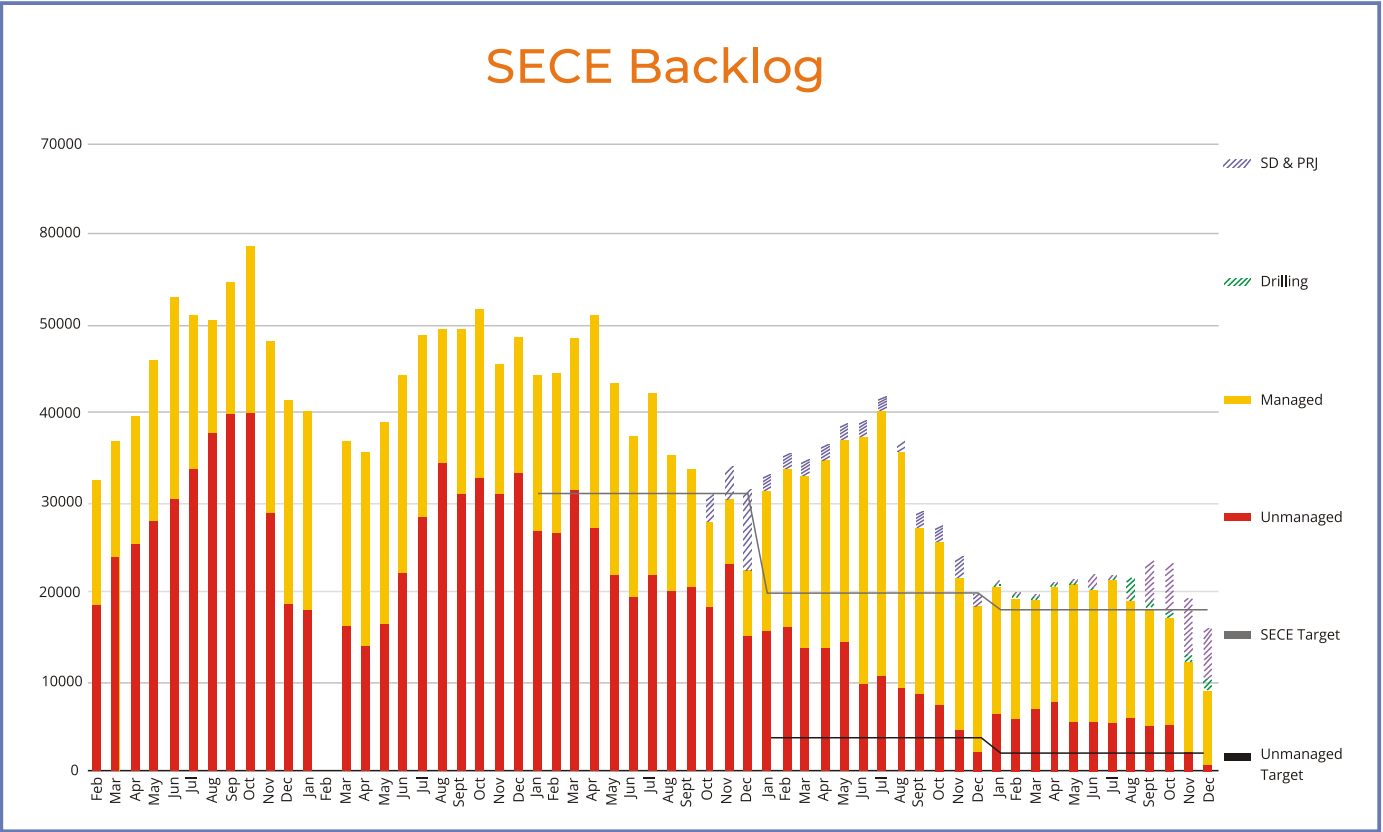

# Operational Delivery Highlights

- Endorse and support the overall Vision, Mission, and Corporate Strategic Principles.
- Ensure the delivery of Core Values alongside Leadership Fundamentals and Process
- Safety Leadership, supporting all initiatives driven by the Senior Leadership Team.
- Ensure full compliance with all HSE policies and quality procedures.
- Build and manage the budget for all aspects of OPEX delivery while maximising CAPEX opportunities.
- Proven track record of safely delivering 2 million maintenance man-hours annually through a 700+ offshore team.
- Demonstrated success in optimising and improving maintenance build and planning, supported by the onshore team.
- Successfully reduced and managed the SECE backlog, achieving a 70% reduction over a five-year contract period.
- Optimised all SMC delivery and efficiency, reducing dependency on key vendors by 40%.

## Overall Backlog

# Why Red Sky?

### Experience You can Rely on

We have decades of hands-on experience in operations, maintenance, and asset integrity, supporting onshore and offshore energy operations. Our teams deliver complex, high-risk projects and manage full O&M scopes-consistently exceeding client expectations. We know the industry's demands because we meet them every day.

### Flexibility Built-in

No two assets, clients, or projects are the same. That's why we build flexibility into everything we do—whether adapting to operational constraints, optimising resources, or integrating with your in-house teams. Our support is tailored to your operational philosophies, performance targets, and shifting priorities, delivering scalable, responsive services that add value where and when it's needed most.

### Innovative, Smarter Solutions

We challenge conventional thinking—from questioning OEM recommendations to applying data-driven strategies, leveraging digital tools, and optimising maintenance frequencies. We believe there's always a better, leaner, and more effective way to deliver. By embracing digitalisation, remote vendor support, and integrated multi-discipline services, we reduce overheads, boost agility, and drive better outcomes for our clients.

### Collaborative, Long-term Focus

Our strength is in building trusted, transparent, long-term partnerships—with clients and delivery teams alike. We operate as a true extension of your organisation, integrating seamlessly with your processes, culture, and operations. Together, we share risk, align incentives, and deliver sustainable, measurable performance across the full asset lifecycle.

# Why Choose Red Sky Energy?

Red Sky Energy is powered by a team of highly experienced integrity and maintenance specialists, with proven expertise in managing asset risks and operational challenges. We understand the operational, financial, and safety demands of modern energy operations — and tailor our solutions to deliver sustainable, measurable outcomes.

We recognise that **asset integrity is fundamental to operational safety**, performance, and business continuity. Our approach is **thorough, traceable, and results-driven** — ensuring accurate, auditable improvements that enhance operational success and long-term value.

## Partnering for Performance

By choosing Red Sky Energy, you're choosing a partner dedicated to improving the **integrity, availability, and dependability of your assets**. Our collaborative, flexible team will work with you to develop maintenance and integrity strategies tailored to your operational needs, asset risks, and business goals.

## Our Commitment

Our mission is to maximise asset lifespan, maintain operational reliability, and reduce long-term maintenance costs. By safeguarding the integrity of infrastructure and equipment, we help clients minimise downtime, operational risk, and the environmental and financial impact of unplanned failures.
